Get to Know Us Better

There are quite a few large players in the industrial and high performance segments of the coatings market. **So, what makes us different? Why choose us? Here is why!**

Our Story

We are a close team of engineers, NACE Level 3 coating inspectors, experienced applicators and chemists, with one important trait in common: We are all passionate about providing solutions to the toughest challenges that plague many industries. We decided to combine our years of experience on each specific area, put our thinking caps on and, together, source the best raw materials to develop and bring to the market the best products in terms of performance, ease of application and affordability.

This is how **Atlas Polymers** was born.

Development Process – Step by Step

Step 1

Research & Development

We spent the first couple of years on perfecting every formulation. The primary two areas of focus were safety of the materials we were working with and performance. They had to be safe to use and they had to be the best available. Once the lab results were satisfactory, we moved on to the next step.

Step 2

Field Test

All our products were subjected to field trials across a vast range of industries throughout the US, and their performance measured using a long-term evaluation and inspection plan. Some graduated from our program with flying colors almost right away, while others required minor tweaks and re-evaluation.

Step 3

Go to Market

Because of such careful and detailed processes, today, we have what is considered one of the most advanced product lines in the market, with a proven history in the field. We continuously work on improving our products to have the best and most efficient solutions in the field.

This success was made possible by our team, who strive to stay trained and keep up with the latest standards and application techniques.

What we offer

- We offer a major difference: **peace of mind.**
- We listen to our customers; we partner with them, and offer them a fully customized solution whenever an off-the-shelf product will not provide the results needed.
- We have done our due diligence, and have gone above and beyond to produce materials that are second to none. When **Atlas** is used on equipment or structures, the asset owner, design engineer or operator can rest assured that our materials will do the job.

Turn-key Services

We go even further. Atlas Polymers & C2-ES have combined their engineering, surface preparation and application expertise to offer the first turn-key service in South Florida. This means that customers can now get a complete and specialized service, including product and workmanship warranty, from a single source, within budget and as scheduled, with just one call.

Atlas Polymers Stands on Three Solid Pillars

Integrity

Every day, Atlas Polymers strives to make decisions that are ethical, responsible and result in a win-win situation for all involved.

Versatility

At Atlas Polymers, we embrace an entrepreneurial philosophy that allows for the evolution of our products, by rising to the opportunity to take the toughest challenges in today's industry.

Support

This is our core value. We understand that customers and distributors grow the most through dedicated support which, in turn, helps Atlas Polymers grow too. We have, and will always seek to identify and solve customer needs.

Seals of Approval

Atlas materials have been tested and approved by some of the toughest industry standards:
